

Exploring the use of Open Educational Resources in Physics

Nancy O'Neill, Ed.D.

Acting Director, Kirwan Center for Academic Innovation, University System of Maryland

Chesapeake Section of the American Association of
Physics Teachers Fall 2023 Semi-Virtual Meeting
October 21, 2023 @
The University of Maryland College Park

Open Science is the principle and practice of making research products and processes available to all, while respecting diverse cultures, maintaining security and privacy, and fostering collaborations, reproducibility, and equity.

“Federal agencies are celebrating 2023 as a Year of Open Science”

Why OER?

OER = Free + Open

OER = Free + Open

5Rs Permissions

Retain

- Make, own, and control your own copy of the content

Reuse

- Use the content in its unaltered form

Revise

- Adapt, adjust, modify, improve, or alter the content

Remix

- Combine the original or revised content with other OER to create something new

Redistribute

- Share your copies of the original content, revisions, or remixes with others

Mini-Lab: Investigating Gas Laws

View Resource

333 1 0

Description

Overview: This activity is a mini-lab where students determine relationships between gas laws and temperature, pressure, and volume; particularly Charles and Boyle's Law. The concept of mini-labs originated from Dr. Dan Branan and Dr. Matt Morgan. See mini-labs.org for more details.

Sound Analyzer JS Model

written by Félix J. García Clemente, Tze Kwang Leong, and Loo Kang Wee

The Sound Analyzer JavaScript model records the sound from the computer's microphone and displays its frequency spectrum. It is designed for classroom demonstration and student experimentation. For example, measure sound from pipes with different boundary conditions and estimated the length of the pipe.

The Sound Analyzer JS Model was developed using the Easy JavaScript Simulations (EJS) version 6. It is distributed as a ready-to-run html page and requires only a browser with JavaScript support. This model runs on all platforms, including mobile devices.

The Astronomy of Many Cultures

Created June 20, 2020 by Andrew Fraknoi

This resource guide, for instructors and students in introductory astronomy courses, focuses on the contributions to astronomy of African, Asian, Hispanic, South Pacific, Islamic, and Native American cultures. It also contains a section on reports and articles for achieving greater diversity in science. Written by Andrew Fraknoi, the guide includes written, on-line, and audio-visual materials, which can be used directly in the classroom, for student papers, or for personal enrichment.

Resources

- ✓ A Higher Education Physics collection in the M.O.S.T. Commons:
<https://most.oercommons.org/curated-collections/81> - the default for collections is to list by title, but we recommend choosing “Visits” from the “Sort By” dropdown. It is more likely to bring up the more relevant resources.
- ✓ For High School Physics, the OER Commons has more than 1,300 entries -
https://oercommons.org/search?batch_size=20&sort_by=search&view_mode=summary&f.sublevel=high-school&f.general_subject=physics&f.language=en
- ✓ Worcester Polytechnic Institute collection: <https://libguides.wpi.edu/oer/physics>

Questions may be directed to M.O.S.T. at most@usmd.edu
